- I am taking the skills bootcamp in software engineering fundamentals. In this boot camp, I am gaining valuable knowledge on variable declaration, data types, casting data, using for and while loops, data structures (list,set and dictionaries), exceptional handling , importance of comments, different string functions and file read and write.
- These all the concepts learned so far in the bootcamp makes me comfortable with python to use in software development. I am finding jobs in linkedin with python as technology used in many companies. And offering good packages with different roles in different levels.
